Education

BSc Computer Science (with placement year) *Oct 2025 – 2029 (expected)*
Cardiff University
- 86% (First Class) grade in First year.
- Relevant coursework: Linear Algebra, Calculus, Statistics, Programming (Python, Java), Web Programming, Logic.

A-Levels: Computer Science (A); Mathematics (A); Economics (A)
- Social Media Officer of the Farnborough 6th Student Union – created short form content, gathering over 190,000 views.

Experience

Full Stack Developer *Oct 2025 – Dec 2025*
Last Minute Hospitality Ltd
- Developed a full-stack web application using SvelteKit and TailwindCSS to connect local businesses with Ukrainian immigrants for short-term, urgent employment.
- Utilized PocketBase (SQLite) to manage user authentication, booking and employee data.
- This system led to around 60% faster job placements and much faster response times for roles by removing the need for manual organisation of employees.

Web Developer *Jun 2023 – May 2026*
Sweet Passion Cakes
- Redesigned and developed a responsive web app using SvelteKit and TailwindCSS where users could browse products and learn about the shop.
- Boosted online sales by 24.3% over a 3-month period through building a web shop where users could order cakes directly from the website, automating a previously manual ordering process via email.
- Created an admin panel using Vercel Edge Config where the business owners could manage "Afternoon Tea" scheduling and publish notices to the website.

Selected Projects

Reinforcement Learning Creature Walking Simulation • *Python, TensorFlow, Pygame*
- Designed a custom neural network using TensorFlow to map physics inputs (joint positions and velocities) to muscle actions, with the aim of learning how to walk.
- Built a 2D environment using Python, Pygame, and Pymunk to model rigidbody physics on a virtual creature.

AI/Multiplayer Chess Game • *C, Stockfish*
- Developed a chess engine in C, with the option to either play against an AI, or local multiplayer.
- Integrated the Stockfish engine asynchronously via the UCI (Universal Chess Interface) protocol to allow for single player mode with variable difficulty.
- Created an easy-to-use interface using SDL2 and an immediate-mode UI library (microui).

Abehub (School-wide social media) • *Python, Flask, SQL*
- Collaborated with a friend to build, deploy, and maintain a full-featured Twitter-like social media for my school that onboarded 250+ real users.
- Used Flask to serve content and handle authentication, alongside an SQLite database to manage user data, posts, likes, and follows.

Hawk-Dove Simulation • *Python, Matplotlib*
- Created a behavioural simulation modelling evolutionary game theory dynamics using Python after reading Richard Dawkins' "The Selfish Gene".
- Utilized Matplotlib to create graphs showing evolutionarily stable strategies (ESS) and population distributions over 1000+ generations.

Custom Vehicle Welding & Design
- Designed and welded go-karts, motorbikes, and custom E-bikes from scratch.

Skills

- **Languages:** C/C++, Python, JavaScript / TypeScript, Java, SQL
- **Frameworks & Tools:** TensorFlow, Numpy, SvelteKit, React.js, Flask, Git, Linux, Bash, Autodesk Fusion (CAD)

Certifications

Harvard University CS50 (Distinction); Extended Project Qualification (A); AQA Further Mathematics (7)
